PowerShell: Validace doménových uživatelů z .csv

<Code:powershell [enable_line_numbers=1, start_line_numbers_at=1]> import-module ActiveDirectory $users=Import-Csv -Path user_validator.csv foreach ($user in $users) { $samAccountName = $user.samAccountName $ping_user = $(try {Get-ADUser -ldapFilter „(samAccountName=$samAccountName)“} catch {$null})

```
if ($ping_user -ne $null)
    { Write-Host $samAccountName";FOUND" }
else
    { Write-Host $samAccountName";NOT-FOUND" }
```

} </Code>

user_validator.csv <Code [enable_line_numbers=0]> samAccountName uživatel01 uživatel02 </Code>

ad validation, powershell, get-ADuser
